Single-Use  
Flexible  
Ureteroscope

A NEW SCOPE FOR EACH PATIENT  
**EU-Scope™**

# No Contamination No Repair No Sterilization

## The EU-Scope™ Single-Use Digital Flexible Ureteroscope is now available!

Now there's an innovative new technology that will change the way you think about flexible ureteroscopy.

The new EU-Scope™ System delivers high-resolution digital images for high-quality visualization and seamless navigation – to help you remove stones more easily, quickly and safely.

With a new scope every time you open the EU-Scope™ package, you eliminate the inconsistent performance and maintenance hassles associated with reusable scopes. That means no costly scope repairs, no scope maintenance, no scope reprocessing and no degradation of scope performance over time. You no longer need to spend time and money on sterilization. And there are no delays or cancellations due to lack of scope availability.

Instead, you can confidently start each case with a new high-quality, digital scope that delivers true 275° deflection in both directions, as well as image quality comparable to the leading digital reusable scopes – and superior to fiber-optic technology.

You can clearly see and confidently treat a wide range of stones and other urological conditions.

**Easy maneuverability**  
275° up & down deflection and precise tip motion makes navigation easy

**High quality image**  
Auto focus, white balance and adaptive LED light control function guarantees clear and sharp images during the lithotripsy

**The system is the solution**  
The EU-Scope™ System is an all-in-one solution, the ideal choice for a wide range of clinical environments. Its light source is built into the exceptionally lightweight, ergonomic control handle to help guide the way during procedures.
